DETAILED ACTION

Notice to Applicant

1. This communication is in response to the Board of Patent Appeals and Interferences decision received on 03/30/2009. Claims 1-6, 8-16 and 18-23 remain pending.

Allowable Subject Matter

2. Claims 1-6, 8-16 and 18-23 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art of record neither anticipates nor renders obvious to a method and internet compatible system for displaying medical information derived from plurality of sources in composite windows including a first tabular panel and a second graphical panel, wherein the first panel includes a cursor, second panel includes a slider bar, and the slider bar in the second panel controls the cursor on the first panel enabling concurrent user navigation in both panels.

4. The most remarkable prior art of record is Schoenberg et al. (U.S. Patent Publication No. 2005/0125256 A1). Although Schoenberg teaches a medical information system which receives patient data from various sources and displays such information in a variety of formats, present multiple graphical displays of patient information, offer the user choice of one-four simultaneous displays, and a time scale which can be selectively changed by a user for any or all of the images (abstract, paragraph 0054), Schoenberg fails to teach slider bar in one panel, a cursor in the other panel and slider bar controlling the cursor and enabling concurrent user navigation in both panels.

5. The deficiencies are not remedied in any other reference, and no reference teaches these deficiencies.
6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited but not used prior art teach Method and apparatus for controlling video display priority 4956640 A, Medical information system with automatic updating of task list in response to charting interventions on task list window into an associated form 5077666 A, Method for use of color and selective highlighting to indicate patient critical events in a centralized patient monitoring system 5262944 A, Data processing system and method for automatically performing prioritized nursing diagnoses from patient assessment data 5404292 A, Ambulatory patient health monitoring techniques utilizing interactive visual communication 5441047 A, Display control apparatus and method of using same 5499036 A, Method and apparatus for coordinating concurrent updates to a medical information database 5546580 A, Computer system and method for storing medical histories using a carrying size card 5659741 A, Method and system for constructing formulae for processing medical data 5715451 A, Distributed hypermedia method for automatically invoking external application providing interaction and display of embedded objects within a hypermedia

document 5838906 A, Intensive care information graphical display 5921920 A, Medical data display method 5941820 A, Systems, methods and computer program products for monitoring, diagnosing and treating medical conditions of remotely located patients 6024699 A, Interactive method and system for managing physical exams, diagnosis and treatment protocols in a health care practice 6047259 A, Method and apparatus for controlling a medical ventilator 6390091 B1, Ventilator control system and method 6584973 B1, Remote control and tactile feedback system for medical apparatus 6834647 B2.
